

Worksheet_Delgado#2

2022-10-09

1. Create a vector using : operator a. Sequence from -5 to 5. Write the R code and its output. Describe its output.

```
five <- -5:5  
five
```

```
## [1] -5 -4 -3 -2 -1 0 1 2 3 4 5
```

#The output is it display from negative five to positive 5.

b. x <- 1:7. What will be the value of x?

```
x <- 1:7  
x
```

```
## [1] 1 2 3 4 5 6 7
```

2.* Create a vector using seq() function a. seq(1, 3, by=0.2) # specify step size Write the R code and its output. Describe the output.

```
num1 <- seq(1, 3, by=0.2)  
num1
```

```
## [1] 1.0 1.2 1.4 1.6 1.8 2.0 2.2 2.4 2.6 2.8 3.0
```

The output displays the counting of 1 to 3 by 0.2.

3. A factory has a census of its workers. There are 50 workers in total. The following list shows their ages: 34, 28, 22, 36, 27, 18, 52, 39, 42, 29, 35, 31, 27, 22, 37, 34, 19, 20, 57, 49, 50, 37, 46, 25, 17, 37, 43, 53, 41, 51, 35, 24, 33, 41, 53, 40, 18, 44, 38, 41, 48, 27, 39, 19, 30, 61, 54, 58, 26, 18. a. Access 3rd element, what is the value?

```
age <- c(34, 28, 22, 36, 27, 18, 52, 39, 42, 29, 35, 31, 27,  
22, 37, 34, 19, 20, 57, 49, 50, 37, 46, 25, 17, 37, 43, 53, 41, 51, 35,  
24, 33, 41, 53, 40, 18, 44, 38, 41, 48, 27, 39, 19, 30, 61, 54, 58, 26,  
18)  
third <- age [[3]]  
third
```

```
## [1] 22
```

b. Access 2nd and 4th element, what are the values?

```
age <- c(34, 28, 22, 36, 27, 18, 52, 39, 42, 29, 35, 31, 27,  
22, 37, 34, 19, 20, 57, 49, 50, 37, 46, 25, 17, 37, 43, 53, 41, 51, 35,  
24, 33, 41, 53, 40, 18, 44, 38, 41, 48, 27, 39, 19, 30, 61, 54, 58, 26,  
18)  
second <- age [[2]]  
fourth <- age [[4]]
```

```
age <- c(second,fourth)
age
```

```
## [1] 28 36
```

c. Access all but the 1st element is not included. Write the R code and its output

```
age <- c(34, 28, 22, 36, 27, 18, 52, 39, 42, 29, 35, 31, 27,
        22, 37, 34, 19, 20, 57, 49, 50, 37, 46, 25, 17, 37, 43, 53, 41, 51, 35,
        24,33, 41, 53, 40, 18, 44, 38, 41, 48, 27, 39, 19, 30, 61, 54, 58, 26,
        18)
```

4. *Create a vector `x <- c("first"=3, "second"=0, "third"=9)`. Then named the vector, `names(x)`.

```
x <- c("first"=3, "second"=0, "third"=9)
x
```

```
## first second third
##      3      0      9
```

a. Print the results. Then access `x[c("first", "third")]`.

b. Write the code and its output.

```
x <- c("first"=3, "second"=0, "third"=9)
x
```

```
## first second third
##      3      0      9
```

```
x[c("first", "third")]
```

```
## first third
##      3      9
```

#Describe the output. - The output only displays the first and third element.

5. Create a sequence `x` from `-3:2`.

```
x <- seq(-3:2)
```

a. Modify 2nd element and change it to 0;

b. Write the code and its output.

```
x <- seq(-3:2)
x[2] <- 0
x
```

```
## [1] 1 0 3 4 5 6
```

#Describe the output. - The second element displays 0.

6. *The following data shows the diesel fuel purchased by Mr. Cruz. a. Create a data frame for month, price per liter (php) and purchase-quantity (liter).Write the codes.

```
diesel <- data.frame(Month = c("Price per liter(Php)","Purchase-quantity (Liters)"),
Jan = c("52.50","25"),
Feb = c("57.25","30"),
March = c("60.00","40"),
Apr = c("65.00","50"),
```

```
May = c("74.25", "10"),
June = c("54.00", "45"))
diesel
```

```
##           Month   Jan   Feb March   Apr   May   June
## 1   Price per liter(Php) 52.50 57.25 60.00 65.00 74.25 54.00
## 2 Purchase-quantity (Liters)   25   30   40   50   10   45
```

- b. What is the average fuel expenditure of Mr. Cruz from Jan to June? Note: Use `weighted.mean(liter, purchase)`

```
purchase <- c(25, 30, 40, 50, 10, 45)
purchase
```

```
## [1] 25 30 40 50 10 45
```

```
liter <- c(52.50, 57.25, 60.00, 65.00, 74.25, 54.00)
liter
```

```
## [1] 52.50 57.25 60.00 65.00 74.25 54.00
```

```
weighted.mean(liter, purchase)
```

```
## [1] 59.2625
```

7. R has actually lots of built-in datasets. For example, the `rivers` data “gives the lengths (in miles) of 141 “major” rivers in North America, as compiled by the US Geological Survey”.

- a. Type “`rivers`” in your R console. Create a vector data with 7 elements, containing the number of elements (length) in rivers, their sum (`sum`), mean (`mean`), median (`median`), variance (`var`) standard deviation (`sd`), minimum (`min`) and maximum (`max`).

```
data <- c(length(rivers), sum(rivers), mean(rivers), median(rivers), var(rivers),
sd(rivers), min(rivers), max(rivers))
```

```
data
```

```
## [1] 141.0000 83357.0000 591.1844 425.0000 243908.4086 493.8708
## [7] 135.0000 3710.0000
```

- b. What are the results?
c. Write the code and its outputs.

8. The table below gives the 25 most powerful celebrities and their annual pay as ranked by the editions of Forbes magazine and as listed on the Forbes.com website.

- a. Create vectors according to the above table. Write the codes.

```
magazine <- 1:25
```

```
CelebName <- c("Tom Cruise", "Rolling Stones", "Oprah Winfrey", "U2",
               "Tiger Woods", "Steven Spielberg", "Howard Stern", "50 Cent", "Cast of the sopranos",
               "Dan Brown", "Bruce Springsteen", "Donald Trump", "Muhammad Ali", "Paul McCartney",
               "George Lucas", "Elton John", "David Letterman", "Phil Mickelson", "J.K Rowling",
               "Bradd Pitt", "Peter Jackson", "Dr. Phil McGraw", "Jay Lenon", "Celine Dion", "Kobe B")
pay <- c(67, 90, 225, 110, 90, 332, 302, 41, 52, 88, 55, 44, 55, 40,
        233, 34, 40, 47, 75, 25, 39, 45, 32, 40, 31)
```

```
Data_Ranking <- data.frame(magazine, CelebName, pay)
Data_Ranking
```

```
##      magazine      CelebName pay
## 1          1      Tom Cruise  67
## 2          2    Rolling Stones  90
## 3          3    Oprah Winfrey 225
## 4          4          U2      110
## 5          5      Tiger Woods  90
## 6          6    Steven Spielberg 332
## 7          7    Howard Stern 302
## 8          8      50 Cent    41
## 9          9 Cast of the sopranos 52
## 10         10      Dan Brown  88
## 11         11    Bruce Springsteen 55
## 12         12      Donald Trump 44
## 13         13      Muhammad Ali 55
## 14         14      Paul McCartney 40
## 15         15      George Lucas 233
## 16         16      Elton John  34
## 17         17    David Letterman 40
## 18         18      Phil Mickelson 47
## 19         19      J.K Rowling  75
## 20         20      Bradd Pitt   25
## 21         21      Peter Jackson 39
## 22         22    Dr. Phil McGraw 45
## 23         23      Jay Lenon   32
## 24         24      Celine Dion  40
## 25         25      Kobe Bryant  31
```

b. Modify the power ranking and pay of J.K. Rowling. Change power ranking to 15 and pay to 90.

```
magazine[19] <- 15
magazine
```

```
## [1] 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 15 20 21 22 23 24 25
```

```
pay [19] <- 90
pay
```

```
## [1] 67 90 225 110 90 332 302 41 52 88 55 44 55 40 233 34 40 47 90
## [20] 25 39 45 32 40 31
```

```
Magazine_Ranking <- data.frame(magazine, CelebName, pay)
Magazine_Ranking
```

```
##      magazine      CelebName pay
## 1          1      Tom Cruise  67
## 2          2    Rolling Stones  90
## 3          3    Oprah Winfrey 225
## 4          4          U2      110
## 5          5      Tiger Woods  90
## 6          6    Steven Spielberg 332
## 7          7    Howard Stern 302
## 8          8      50 Cent    41
## 9          9 Cast of the sopranos 52
## 10         10      Dan Brown  88
